

Abstract of the Disclosure

A sterilized chemical composition is stored in a sterile environment for a prolonged period of time, hermetically sealed in successive enclosures and a shipping enclosure. The third sealing layer is removed prior to entering a storage area. The second layer is removed prior to taking the container to the sterile environment. The storage area may also be sterile. The innermost container may be an aerosol container and the composition a disinfectant liquid such as alcohol. The entire shipping enclosure and contents are preferably sterilized with gamma radiation.
